

## Peugeot introduces AI across the board

After Peugeot was one of the first car manufacturers to test Chat-GPT in a large-scale pilot phase, the artificial intelligence is now coming as standard in all new vehicles with voice control. Chat-GPT is part of the Connect Plus package or can be subscribed to as a stand-alone function for people who bought their Peugeot before the launch. The AI answers almost all questions it is asked, navigates to named places or points of interest on request and entertains the vehicle occupants on longer journeys with a quiz, for example. (aum)

## Images for article

All Peugeots with voice control are pre-equipped for Chat-GPT as standard.
